A New Year's Message From Vincent R. Volpe

I want to wish all Jarvis J26 Distributors and their employees a happy new year and a new century. The 20th Century saw Jarvis Products grow from a small manufacturing firm to a major worldwide operation, offering all types of products for efficient and economical meat and poultry production.

With the introduction of several new products, namely the Model JCK-1 Automatic Hog Splitter, our sales potential for the coming year shows great promise. Jarvis' main goal is to provide high quality, long lasting tools that solve and satisfy our customer's processing demands. May this new year be one of growth and accomplishment.

The IPA 2000 MATIC Show in Paris, France

Between November 21 and 24, Jarvis Products along with Industrade of France, Jarvis' French distributor, participated in the IPA 2000 MATIC expo held at the Paris Nord Villepinte Exhibition Center. This is one of the major shows that Jarvis participates. Manufacturers from around the world demonstrate their latest products to European, Middle Eastern and African customers. Besides seeing old friends and business acquaintances, these expositions are an ideal way for determining customer requirements and industry trends. For Jarvis, an additional satisfaction is being lauded on the performance of our tools, especially the way they stand-up to demanding workplace environments. This page and page 2 show several pictures taken at the MATIC show:

Award Given in South Africa

Recently an award was presented to the 1000th person in South Africa purchasing a Jarvis Dehider. Receiving the award was Mr. Edwin Claasen, owner of the EAC Group of Abattoirs, headquartered in Wolwehoek, Republic of South Africa (RSA).

Shown in this picture is Ben Myburgh, General Manager of Jarvis Products Corporation, South Africa, Piet Snyman, EAC Group's Financial Manager and Edwin Claasen receiving the award.

Jarvis Introduces the Model PFC-1 Picking Finger Cutter for Poultry

Jarvis' new Model PFC-1 Picking Finger Cutter.

Jarvis Products Corporation has developed a new tool for poultry processors, the Model PFC-1 Finger Cutter. The PFC-1 is an air powered finger cutter specifically designed to remove worn picking fingers quickly and easily with little effort. It is fast, powerful, extremely maneuverable, and completely eliminates the dangerous use of knives and razor blades.

Designed for operator comfort, it is lightweight at only five-and-a-half pounds (2.5 kg) and measures only eight inches (302 mm) in length. There is no operator fatigue due to the tool's light trigger pull action. A sturdy, durable design

requires little maintenance, and the PFC-1's stainless steel and aluminum construction guarantees long service life with no oxidation. Also available, is Jarvis' Model PFI-1 Picking Finger Installer. For more information about this new product, contact Kevin or Harry Chamberlain by phone (1-860-347-7271) or by fax (1-860-347-9905).

I Dream of Sydney

In December 2000, Mr. Volpe traveled to Australia (next story). While in Sydney, he shot several pictures of the harbor, including the famous Sydney Opera House. Remember, it is Summer down under - no snow, sleet, freezing rain or short, dreary winter days.

Down Under.....A Trip to Australia and New Zealand

During December 2000, Mr. Volpe made his annual trip to visit Jarvis operations in New Zealand and Australia. In New Zealand, Mr. Volpe visited the AFFCO plant in Rangiora, the PPCS sheep processing facility and Canterbury Frozen Meat Company in Canterbury, and PPCS' venison processing plant in Islington. In Australia, Mr. Volpe was particularly interested in the use of Jarvis' Model CV-1 vacuum system for extracting the blood line from salmon at the Aquatas fish factory located in Margate, Tasmania. These are several pictures taken during his trip:

AFFCO plant in Rangiora, New Zealand

From left, Ippy Hill, Plant Manager at the Canterbury Frozen Meat Company, Allan Lee, Jarvis' New Zealand Manager and William (Taffy) Williams, the plant's Production Supervisor.

PPCS venison processing plant in Islington. PPCS operates the world's three largest venison processing facilities.

PPCS' sheep processing plant in Canterbury, New Zealand.
