

## Jarvis Products Corporation

### Hand Held Cutting Tools For the Seafood Industry

Jarvis Products Corporation is one of the world's largest producers of food processing equipment. For 100 years, the Jarvis name has stood for quality, craftsmanship, and dependability. Jarvis equipment has been designed to increase productivity, produce a superior product, increase operator comfort, and at the same time reduce labor costs. Jarvis also supplies auxiliary equipment such as complete vacuum systems. Headquartered in Middletown, Connecticut, U.S.A., the Jarvis product line is sold and serviced worldwide through twelve branch locations and Jarvis' J26 Federation of Distributors.

FTC-JARVIS Pin Bone Remover

The patented FTC-JARVIS Ergo-Light Pin Bone Remover uses a unique mechanical picking action to gently remove pin bones from nearly all fresh/defrosted and smoked fillets. This air powered tool is fast, efficient, reliable and labor saving, producing the highest possible yields. Designed for rugged use, the pin bone remover performs under the most difficult working conditions.

Quickest and most efficient way to remove scales is the FTC-JARVIS Ultra-Light Fish Scaler. It is lightweight, weighing only 1.7 lbs (0.77 kg). Made of corrosion resistant materials, the fish scaler is easy to use and vibration free. A water supply adapter and air panel are also included.

FTC-JARVIS Fish Scaler

For removing claws, fins, heads and tails, Jarvis also makes the Airsnip® line of power assisted scissors in several sizes and cutting configurations to suit any application. Our Model 35 PA-2 or the Model 35 Airsnip® are perfect for close cutting and trimming procedures, minimizing operator effort on highly repetitive and difficult cuts.

Our Model 35 PA-2 is easy to operate, and especially designed for high yield operations requiring full blade control. They are designed for complete operator comfort, and blade movement can be stopped at anytime - just like an ordinary pair of scissors. Because they are totally immersible, all Airsnip® products are easy to clean and maintain. Several styles of hardened stainless steel blades are also available. Blades are easily removed for sharpening.

Model LKE-1 Vacuum Gun

Jarvis' LKE-1 Vacuum Gun is a pneumatically controlled gun ideally suited for high-speed vacuum removal of kidneys, bloodline and eggs. The lightweight gun has a unique air trigger system that reduces operator fatigue, and with instantaneous vacuum provides increased production. It's easy to use, clean and maintain. The gun's replaceable tubes and handles reduce maintenance costs. For many years this tool has been used by New Zealand fisheries for removing salmon kidneys and bloodlines.

Model SPC 165 Circular Saw

Jarvis Model SPC 165 Circular Saw with Depth Gauge has multiple purposes. With a two (2) inch adjustable cutting depth, it can easily split open a variety of large fish. All stainless construction ensures no corrosion. Instant blade stop action stops the blade at any time.

Model 404 Reciprocating Breaking Saw

Our line of lightweight, flexible and high speed reciprocating saws (Models 404, 424, 444 and 464) are ideal for removing heads, fins and tails on larger sized fish, such as tuna, shark or swordfish. Jarvis' reciprocating saws have a well founded reputation of rugged construction, high speed and good cutting performance,

Model 464 Reciprocating Breaking Saw

and can be purchased with either electric or pneumatic drives. For many years East Coast fisherman have used Jarvis' Model 464 breaking saws to efficiently remove tuna tails.
